Paper 2 Structured Questions (Core)

October/November 2016

MARK SCHEME

Maximum Mark: 90

Published

This mark scheme is published as an aid to teachers and candidates, to indicate the requirements of the examination. It shows the basis on which Examiners were instructed to award marks. It does not indicate the details of the discussions that took place at an Examiners' meeting before marking began, which would have considered the acceptability of alternative answers.

Mark schemes should be read in conjunction with the question paper and the Principal Examiner Report for Teachers.

Cambridge will not enter into discussions about these mark schemes.

Cambridge is publishing the mark schemes for the October/November 2016 series for most Cambridge IGCSE[®], Cambridge International A and AS Level components and some Cambridge O Level components.

(d) Decision (1)

Loan (Max 3)

- Will cost \$5 000 in interest over the 5 years
- Means Maneesh will keep all future profit earned
- Loan has to be repaid

Partnership (Max 3)

- Brother may bring in additional expertise
- Will be able to share workload
- Maneesh will lose 10% of profits earned
- Brother will bear 10% of any losses
- Capital does not have to be repaid

[7]

(e) **Affect appropriation account**

Interest on capital
Partners' salaries
Interest on drawings

[4]

(e) The process of charging whole costs **directly** to a cost unit or cost centre. (1) [1]

(f) Answers may include:

a cost incurred which cannot be traced directly (1) to a product, service or department (1)
an indirect cost (1) (max 2) [2]

(g) So that each unit of production (1) contains a share of total overhead costs. (1) [2]

(h) Decision (1 mark)

Reasons to change to marginal costing: (max 2)

- simple and quick to operate
- no apportionment of fixed costs
- fixed costs are treated as period costs and so remain unchanged at different activity levels
- no over/under absorption of overhead costs to calculate
- no further adjustment needed in the income statement for over/under absorption
- closing inventory is realistically valued at variable production cost
- allows easy calculation of profit when changes in activity occur
- great aid in decision making/pricing/make or buy situation.

Reasons to keep absorption costing: (max 2)

- it shares fixed production costs to units of production, which is fair as these costs are incurred in order to make the output
 - it is easier to determine profitability of several products as they include a share of fixed overheads.
 - it values closing inventory fairly
